RADIO LORE FOR NOVICE AND EXPERIENCED FAN

Broadcasting Entering Era of Usefulness, Leader Says

Improvement of Radio Systems During Last Year Unparalleled.—Question of Synchronized Transmissions Now Commands Attention

BY AUSTIN C. LESCARBOURA.

An era of usefulness, rather than of mere entertainment, is ahead for radio broadcasting in 1928, according to a man prominent in the broadcast field.

Improvement and expansion of physical equipment and reception within the past year, he declares, has been unparalleled But of even greater importance to the future is the final acceptance of radio by the leading artists, the great scholars and educators and the most gifted entertainers as the medium through which they can reach the greatest national audience.

This, added to a new realization on the part of the radio broadcasters that the most effective as well as the most popular programs are those with a distinct educational, cultural and entertainment value, has won for radio prestige and support not even dreamed of a year or two ago.

"Our first year of operation," continues this broadcast leader, "has been a year of preparation and of self-education. It has been a year of learning and building. Through the company's networks, covering practically the entire United States, approximately $6,000,000 was spent in 1927 in presenting radio programs. In addition to this amount, over $2,000,000 was spent for talent alone on sponsored programs presented by some 50 American industries who are clients of the company. The company itself spent over $500,000 for talent utilized in sustaining programs presented by itself.

"Wire service tolls alone, for special circuits to hook up the stations associated with our networks, were in excess of $1,350,000. We were the largest user of the American Telephone and Telegraph Company's telephone wire service. Our permanent specially constructed wire line facilities utilize 10,270 miles of wire and on numerous occasions during the past year, when broadcasting over a nation-wide hookup, we have used more than 20,000 miles of wire.

"Great strides have also been made by our engineers, thus allowing what heretofore seemed impossible. Improvement in the quality of transmission and the commendable achievements of the Federal Radio Commission, together with the installation of permanent and improved wire line facilities furnished us by the telephone company, have all been a remarkable aid to this era of expansion."

One thing becomes more and still more certain in the broadcasting situation, and that is that there are not enough wave lengths to go round. While the higher wave lengths are fairly clear from interference, the middle and lower ones are nothing more than a modern Tower of Babel. Nevertheless, the Federal Radio Commission has done an excellent piece of work in its allotment of broadcast wave lengths. It is simply physically impossible to accommodate all the broadcasters on the few wave lengths available in the present broadcast wave length band.

What promises to help the situation materially is the use of the same wave length by several stations, with precise frequency control by means of a quartz crystal oscillator or other master oscillator. Let it be noted that two transmitters, operating on virtually the same wave length, will set up a serious whistle or heterodyne note, yet if those two transmitters are adjusted on the exact same wave length and to the same frequency, there will be no heterodyne and no interference when handling the same program Of course the scheme is feasible only when two stations are broadcasting the same program.

Synchronized broadcasting is not exactly new. Station WBZ at Springfield, Mass., and its companion station, WBZA at Boston, some 120 miles apart have been utilizing the same wave length and have been keeping in absolute step by means of quartz crystal oscillators, while broadcasting the same program. Very recently, two stations of the Columbia Network, WIAU at Columbus and WGHF at Detroit, have experimented with synchronized frequencies, while broadcasting the same programs of the network. At first some difficulty has been encountered in securing perfect wave length synchronism, due to the precise temperature required for the crystal oscillators, but later in the experiments perfect step has been obtained, with the disappearance of the heterodyning

There has been some mention of using the synchronized frequency idea for all the stations of the Columbia Network, in order to reduce interference to a minimum. Surely the Federal Radio Commission would welcome such an innovation and would assign an exclusive wave length for a given synchronized network. Inasmuch as the trend is decidedly toward network operation it would seem that a common wave length or frequency should be utilized for network broadcasting. We have often been peeved at our picking up the precise same program over and over again, tuning up and down the wave length scale, as the various stations of a network were being tuned in.

Just how the technique is to be worked out, is another matter. That synchronized frequency is one way out of the serious heterodyning now taking place, is apparent. That network broadcasting could very well be handled on the precise same frequency, actually providing better signal strength because of the combined influence of several transmitters at various distances from a given receiver, is admitted However, individual wave lengths still would have to be retained for individual broadcasting, as at present. That could also be arranged.

MULTI-TUBE SETS

These Bringing Real Appreciation of Radio Programs.

Quantity production on low-priced receivers of modern design and acceptable workmanship looms as one of the greatest aids to radio progress, in the opinion of experienced observers While there has been a degree of quantity production in the past, it is pointed out that this has been confined to types of receivers not classed with the better sort in type and performance, thus playing no significant role in bringing large groups of the public to an appreciation of what good radio really has to offer.

The automobile industry has advanced at an unprecedented rate since low-priced powerful and completely equipped cars have come into popularity. This has enabled many millions of people to sense the pleasures and the comforts which previously were known only to those who could afford more costly things. The person who cares to pay for a better car enjoys more luxury, more comfort, greater speed and increased performance, but the basis of his pleasure is a fine power plant, which is becoming increasingly well known to a majority of those who spin over the highways.

In a similar way, the low-priced multi-tube set is bringing large groups to an appreciation of what real radio has to offer. This is the first time the public in general has been able to sense superlative performance at quantity production prices.

The marketing of such sets in no wise should spoil the market for better and more expensive receivers. The only way to do that is to offer at quantity production prices sets that are completely inefficient, for that gives the public no hint as to what radio really offers.

Merchandising experts recognize that it is far easier to sell a satisfied customer a second and better article than to do so to a dissatisfied one. Radio's industry will march on to greater success when more people have sensed the enjoyment of the multi-tube set.

BETTER FOR LOCALS

Reduce Aerial Efficiency If Multi-Tube Set Is Used.

Where a multi-tube set has no provision for reducing the number of stages of amplification that can be used, it sometimes is found that reception is poor on local stations. This is due to the fact that there is too much signal strength resulting in distortion which, in many cases, actually weakens reception The trouble is likely to develop where superheterodyne circuits are used too close to broadcasting stations, because supers have two detectors and the signal strength impressed upon the grid of the second detector is too great.

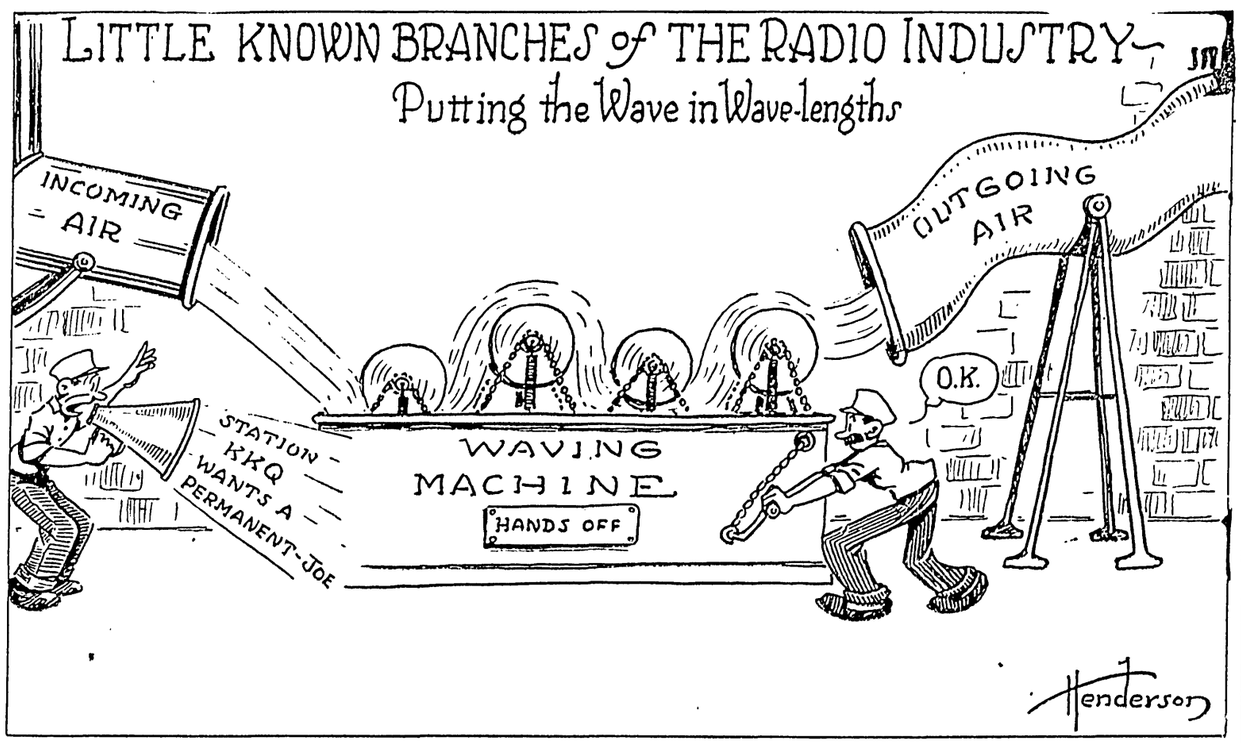
One radio owner solved this problem with a super by combining the audio amplifier with a special tube detector and tuner, using this outfit for the locals. The arrangement has certain advantages over cutting off stages of audio as is the case in many sets since it is in the audio stages that tone is reproduced.

In most instances, the simplest way to improve reception on the too powerful locals is to reduce the aerial efficiency, perhaps to the point of relying upon the binding posts to pick up the signals.

MILK TAKES PLACE OF INK

It is stated that Ovid, the ancient philosopher, taught his pupils to write by using milk on brown paper.

SHORT CIRCUITS



Weekly Radio Test

1. What is a "sponsored" program?
2. What portions of broadcast programs are rated as being of the "sustained" variety?
3. What is a "special purpose" vacuum tube?
4. Is the "hissing" from a tube drowned out by the music from a station or does it actually disappear when the station's carrier wave is picked up?
5. Will a receiver with two stages of audio, but without a power tube, operate at all without a "C" battery?

(Answers to the Radio Test will be found elsewhere in the Radio Section.)

(Copyright, 1928.)

FEBRUARY IN RADIO

Ship Established Distance Reception Record in 1902.

In February, 1902, the steamship Philadelphia of the American Line received messages a distance of 1551 statute miles and received Morse signals up to a distance of 2099 statute miles from Poldhu Station, Cornwall, Eng This is one of the outstanding events of the history of radio, as recorded in February.

Other February developments follow:

Feb. 3, 1908—Transatlantic radio stations were opened to the general public for the transmission of passages between the United Kingdom and the principal cities of Canada

Feb 9, 1912—The Australian Commonwealth station was opened.

Feb. 20, 1915—The Pan-Pacific Exhibition at San Francisco was officially opened by President Wilson at Washington, through the medium of wireless telegraphy.

February, 1916—During the course of a severe blizzard in the United States, wireless telegraphy was extensively used for train dispatching, as the telegraph wires were down

Feb 27, 1922—The first annual Radio Conference was held in Washington.

Feb. 5, 1924—A radio program, broadcast from the East Pittsburgh station, KDKA, was received and rebroadcast in England for the benefit of English listeners.

Feb 23, 1927—Radio Act of 1927 was passed.

Monday Best Radio Night?

Based on the argument that Monday night is the poorest night in point of attendance for the theatre, and the assumption that if the people are not in theatres, movies or other places of amusement on that night, they must be home, the conclusion is reached that this night is the most logical, with the possible exception of Sunday night, for people to listen in on their radios

SCHOOL CONCERTS TO START FRIDAY

Programs Will Be Directed by Walter Damrosch

First Broadcast Planned to Appeal to Children of 6 to 14 Years. Second, Week Later, for High School Students.—Each Begins at 10 A. M.

Years behind other countries in this educational development, the United States, through experiments to be made by Walter Damrosch, the noted orchestra conductor, will for the first time endeavor to reach scholars in the public schools and students in high schools and colleges by radio, with the assistance of the New York Symphony Orchestra of 100 pieces

Mr Damrosch will give two concerts over a chain of stations, the first Friday, Feb 10, for school children, 6 to 14 years old, and the second Friday, Feb 17, for high school pupils, both at 10 o'clock in the morning, Eastern Standard Time.

"School broadcasting has grown so rapidly of late in Great Britain that its magnitude is hardly realized by the majority," say advices just at hand from London. "Some 5000 schools are known to have receiving sets and the actual number may be considerably greater Last term 80,000 school 'Aids to Study' pamphlets were applied for—a figure which gives some idea of the magnitude of the 'Wireless School.' In this way great numbers of children, often deep in the country and very much 'out of things,' are coming under the influence of great experts and teachers and the life of the schools is enriched and freshened."

Just now they are announcing their program of midwinter broadcasts to schools revealing a remarkably complete and varied course of instruction.

"Sir Wilford Davies has reached the fifth term in a two-year course on elementary music," we are told. "Miss Rhoda Power will follow up her lessons on 'Boys and Girls of the Middle Ages' by a similar series on 'Boys and Girls of Tudor and Stuart Times.' Each lesson will tell the story of a boy or girl in some walk of life. Quaint customs of the time are brought in and the lessons are intended to give the pupils a vivid background into which they can fit the facts that they learn in their ordinary school lessons.

"The nature study lessons, like the history lessons, are intended to supplement the ordinary school work Eric Parker will speak of the most interesting features of the week—hibernating animals, early flowers, catkins, nesting birds and so on round the calendar

"M. Stephan and Lloyd James will continue their lessons on French and on speech and language. Mr. James has proved strikingly successful in kindling the interest of school children in the mechanism of the voice and in the problems of good speech.

"Last term Canada and the Western Colonies were taken in the course on empire history and geography This term Africa, Australia and New Zealand will be dealt with and India will come in, the summer term

"As before, there will be concerts by the People's Concert Society and plays given from the studio The plays include Drinkwater's 'Oliver Cromwell,' Ian Hay's 'The Rising Generation' and Shakespeare's 'Macbeth,' 'Julius Caesar' and 'As You Like It.'

"Most of the lessons are intended for the older children of the elementary school. The younger children are envious and look upon listening as a treat and a privilege.

"Secondary schools are to have their share also Four courses will be given in rotation on divers subjects of special interest, such as anthropology, modern poetry, or the League of Nations, with the idea of stimulating the imagination of the pupil and increasing his general knowledge."

And thus it will be seen, despite Mr Damrosch's commendable effort, the United States is still pretty far behind the procession in this important use of radio in schools.

So He Could Say It.

It is evident that Walter Damrosch, conductor emeritus of the New York Symphony Orchestra, derives great enjoyment from his fan mail. He told with particular zest of a South Dakota listener—a plainsman—writing to say that when Mr Damrosch was broadcasting the "Pilgrim's Chorus" from Tannhauser that he grabbed up "his old 'cello" and joined in

"I did that," the plainsman confided, "so that I could say I once played with Walter Damrosch and the New York Symphony Orchestra."

CAMERAS PROHIBITED.

Navy Refuses to Approve Radio Photos for Publication.

Two photographs taken by a well known photo news agency, showing the transmitting and receiving rooms of a certain American battleship have been the cause of an inquiry. They were taken during the Army and Navy manoeuvres recently and were submitted to censorship through routine channels. The Navy Department refused to pass the pictures for publication and further states it is at a loss to understand why the photographer was permitted to gain access to the radio rooms.

"Certain radio transmitters, receivers and parts are not confidential in themselves, that is when taken separately and not installed for use," Navy officials explained, "but all radio installations are confidential and photographers should not be given access to them without specific authority in each instance, even though the pictures be ultimately submitted for censorship."

WANTED Women and Girls who are lovers of color to send for FREE 4-color publication entitled "COLOR NEWS" $5,000 in Prize Contest for those who are willing to use a little energy in this connection No Selling. Just Recommending. If you and you can recommend SUNSET DYES and DY-TINT the new Ode Tint, you can enter this Contest. How prizes. High School Girls YWCA Girls Write Dept. R. North American Dye Corp., Mt Vernon, N Y.
$15,000, Cash Prizes in 3 Contests
$5,000, "Recommender" Prizes.
$5,000, "Dealer" Prizes; $5,000 "I see" Prizes. Prizes announced weekly over radio! Nation-wide.
Note. There's a big Radio Program Tie-up to this contest.

RADIO PROGRAMS

WEAN starts broadcasting at 11 a. m. with the service from the Mathewson Street Methodist Episcopal Church. The Columbia Chain programs will be heard at 3 p. m., 4 p. m., 9 p. m. and 10 p. m. At 6:30 p. m. will be broadcast an organ recital and at 7 p m. the Asia Serenaders. Tomorrow at 8 30 p. m. Linus Travers will broadcast "Here's a Book." The Women's Institute conducted by June Abbott will be on the air at 9:45 a. m. on Tuesday. "Studies of the Constitution" under the auspices of Mrs. Althea M. Jencks in co-operation with the Rhode Island State Board of Education, also Dr. Walter E. Ranger, will be broadcast Wednesday at 7:30 p. m. The Hofman studio ensemble will be on the air at 12 m. on Thursday. Friday at 8 01 p. m. will be broadcast the amateur boxing bouts from Arcadia under the auspices of the Providence Athletic Club. The station will broadcast La Lysine International at 7:50 p. m. on Saturday presenting the Chicago Civic Opera in "Rigoletto" with Elde Norena, Lorna Doone Jackson, Antonio Cortis, Richard Eonelli, Virgilio Lazzari and the conductor, Roberto Moranzoni.

WJAR will commence its week of programs at 3 p. m with the Young People's Radio Conference under the direction of the Greater New York Federation of Churches. At 4 p. m. will be broadcast the Men's Conference from the Bedford Branch of the Y. M. C. A. and at 6:30 p. m. the Weymouth Post No. 76, American Legion Band. The Capitol Theatre program will be on the air at 7:20 p. m. David Lawrence will give a talk entitled "Our Government" at 9 p. m., and the Robert W. Powers' Orchestra will be broadcast at 9:15 p. m. A musical program will be broadcast tomorrow at 7:35 p. m. consisting of Harold Strong, tenor soloist; Valeda Gibeault, soprano, and Hilda Whiting, reader. Tuesday at 8:35 p m., Friedolf Freedlund, bass soloist, will be on the air accompanied by Mildred Bidwell. Leo J. Faucher and his artists will present a program of dance music at 6:30 p. m. on Wednesday, soloist, Raymond Pigeon. The customary program will be broadcast from the station on Thursday. William J. McKenna, baritone soloist, accompanied by Violette Marks, will be on the air at 9:35 p. m. on Friday. Madge Hart O'Rourke, soprano soloist, will be broadcast from the station Saturday at 7:30 p. m.

WLSI begins its weekly programs at 10 30 a m. with the International Bible students' program, who will also broadcast at 5:30 p. m. At 8 p. m. will be heard the service from the Church of the Seventh Day Adventist, Monday and Tuesday the usual programs will be observed. At 7:30 p. m. on Wednesday Eli Aylsworth will give a travel talk. The Rainbow Garden Orchestra will be on the air at 7 p. m. on Thursday. The Cinderella dance orchestra will be broadcast from the station at 8 30 p. m. on Friday. Saturday the customary program will be heard.

WCOT starts broadcasting at 1:30 p. m. with the Hilo Hawaiians Tomorrow at 2 30 p. m. will be heard a studio program. Milt MacNeil and his Blackstone serenaders will be on the air at 7:30 p. m., Tuesday. Wednesday at 7:30 p. m. Marion Prescott and Florence Deitz will broadcast a program of banjo and piano specialties. Thursday and Friday the customary programs will be broadcast. The Rejala entertainers will be on the air at 8 p. m. on Saturday.

WFCI broadcasts a concert at 8:30 p. m. tomorrow by the merry old-timers. Rajah Rabold, Oriental mystic, will be on the air at 2 p. m. on Tuesday. At 7:30 p. m. on Wednesday will be broadcast the Boy Scouts' anniversary program. Thursday at 2 p. m. Mrs. Spencer Arnold, reader, will be on the air. At 9 p. m. on Friday Eddie Casey and his harmonica and tiple orchestra will be broadcast. Saturday at 2 p. m. will be heard a musical program.

WEAN—THE SHEPARD STORES—376.

Leaders Urge Prolonging Its Life Another Year

Representative White and Senator Watson Head Those Who Favor Extension.—Former Sharp in His Criticism of Group's Accomplishments.

The handwriting is on the wall for at least another year of active life by the Federal Radio Commission. This is foreshadowed by the fact that where administration leaders were out of step last year, they are now apparently pulling together.

This is shown by the fact that Representative Wallace White, Jr. (R.), Maine, and Senator James Watson (R), Indiana, almost simultaneously introduced measures in the House and Senate respectively which would prolong the life of the Commission another year, beginning March 15.

To make it unanimous, Secretary Herbert Hoover also declared that in his opinion it was very desirable for the Commission to be continued at least another year.

Senator Watson's bill was simply for the continuation of the Commission, but that of Congressman White carried with it several amendments smacking of the old-time "trust busting" era, one of which would give the Commission the power to fix the time during which chain broadcasting may be carried on, to designate the stations which may be in a hookup, to limit the number of stations which may be in a hookup and to fix the power and wave length.

Another amendment would give the Commission authority to prohibit commercial advertising through a chain of stations. A final amendment is aimed at the alleged monopoly in radio patents.

"I am not yet certain that in the committee I shall approve this provision. I have included it in this bill for much the same reason that I have incorporated the provision with respect to chain broadcasting," Representative White continued. "This question of radio patents is continually discussed, there is a wide spread feeling of dissatisfaction with the existing situation. The subject is surely worthy of investigation and study."

Surprise was occasioned in official circles by the sharp criticism made of the work of the Commission by Representative White at the time he introduced his bill.

"I do not favor the extension of the life of the Commission because of satisfaction with its works, but on the contrary, I propose it because of the failure of the Commission to carry out in important respects the manifest interest of the 1927 Radio Act."

Mr. White said admittedly there were too many stations on the air when the Commission took over the situation and that the law furnished the opportunity and imposed the obligation to eliminate through a refusal to license all stations not contributing to the public need. Another provision required such a distribution of power and time as would give efficient radio service throughout the entire country.

"It has seemed to me that the Commission has completely failed to measure up to expectations in these particulars," Mr. White commented more or less caustically. "It did not require applicants to make an affirmative showing that the operation of their stations would serve the public interest but it automatically issued licenses under the new law to all applying therefor.

"The result is that today there are substantially the same number of broadcasting stations as when the Commission began its activities; there is the same utterly inexcusable concentration of stations in certain congested areas; there is the same absence of stations in many parts of the United States; and it seems to me that the fact itself of the issuance of a license under the new law makes it much more difficult now either to reduce the number of stations or to force a relocation of them in less congested areas throughout the United States; and it seems to me that the fact itself of the issuance of a license under the new law makes it much more difficult now either to reduce the number of stations or to force a relocation of them in less congested areas throughout the United States."

SIMPLICITY WANTED

Numbering Wave Channels Certain to Be Popular.

Efforts of progressive-minded persons to simplify radio by designating ether channels by numbers instead of wave lengths or frequencies is certain to meet with the approval of the radiolist. He long has considered radio unnecessarily technical and will favor anything that tends to clear up the situation.

There appears to be no good reason why receivers should be calibrated for wave lengths running to three numerals when numbers ranging from 1 to 99 could be used without deranging any existing arrangements with regard to assignment of channels. And now that the radio world is thinking in terms of such matters, the radio owner is beginning to wonder why it is necessary to speak of neutrodynes and superheterodynes, eliminators and rheostats, biasing and acuminators and the rest of it.

Today's radiolist is the average person who knows little of radio technique and who is just practical enough to want things made clear. He knows only too well that many radio experts who eat, drink and sleep radio, enjoy their own technique and often unconsciously add to its complication.

ANSWERS TO RADIO TEST

1. One supported by an advertiser.
2. Those portions used to fill out the broadcast between "sponsored" programs and for which the broadcaster stands all the expense.
3. A tube that must be used in a special position, as in the detector socket, audio stages, last audio stages, etc.
4. "Hiss" actually disappears when the carrier wave is picked up.
5. Yes, but poorly and with greatly reduced volume. Many radiolists actually bring about such a condition by operating with a "C" battery until it has no current left for biasing.

Today's Programs in Brief

For the convenience of radio fans the following hourly schedule of broadcasting today is given in brief form. Figures following stations denote wave length.

The hours are based on Eastern Standard Time.

LOCAL STATIONS.

10:30—Church, WLSI, 261.
11.00—Church, WEAN, 275.
1 30—Concert, WCOT, 225.
3.00—Conference, WJAR, 484. Music, WEAN, 275.
4:00—Conference, WJAR, 484. Music, WEAN, 275.
5:30—Church, WLSI, 261.
6:27—Weather, WJAR, 484.
6.30—Organ, WEAN, 275. Music, WJAR, 484.
7:00—Music, WEAN, 275.
7:20—Concert, WJAR, 484.
8.00—Correct time, WEAN, 275. Church, WLSI, 361.
9:00—Music, WEAN, 275. Talk, WJAR, 484.
9:15—Orchestra, WJAR, 484 Correct time, WJAR, 484.
10.00—Music, WEAN, 275.

EASTERN STATIONS.

9.00—Feature, WJZ, 454; WPAP, 395.
9.30—Church, WKBW, 217.
10:20—Concert, WFI, 405.
10:30—Church, WHAM, 278; WKBW, 217. WGY, 380.
10:45—Church, WGR, 303; WBZ, 333; WIP, 508.
10:50—Church, WEEI, 448; WICC, 365.
11:00—Church, WRNY, 809; KDKA, 316; WRC, 369; WAAM, 349. WDRC, 283.

1:35 p. m.—Al Williams and his orchestra.
7:30 p. m.—Madge Hart O'Rourke, soprano soloist.

The whole world knows Aspirin as an effective antidote for pain. *But it's just as important to know that there is only one genuine Bayer Aspirin.* The name Bayer is on every tablet, and on the box. If it says Bayer, it's genuine; and if it doesn't, it is not! Headaches are dispelled by Bayer Aspirin. So are colds, and the pain that goes with them; even neuralgia, neuritis, and rheumatism promptly relieved. Get Bayer—at any drugstore—with proven directions.

Physicians prescribe Bayer Aspirin; it does NOT affect the heart

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

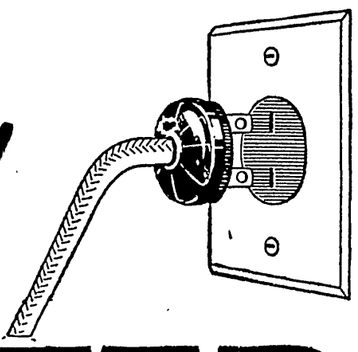
[Enjoy Kolster Radio Hour of Famous Composers every Wednesday over the nation-wide Columbia Broadcasting System. At 9 p. m. Eastern Time.]

A new front line of value!



KOLSTER
*All-Electric**
RADIO

FOR EXAMPLE: Below is the six-tube full console electric (battery-less) Kolster Radio. Cabinet of walnut with special built-in cone speaker. Price, less tubes, $250

On the right is the six-tube table model electric (battery-less) Kolster Radio, enclosed in attractive walnut cabinet. Price, less tubes, $160

* Kolster Electric Sets use the new A. C. tubes. No batteries of any kind required. Operated solely on A. C. house current (100-120 volts—60 cycles). Indoor or outdoor antenna.

Kolster battery-operated models range in price from $89.50 to $375. There is also the Kolster Power Cone Speaker at $175. Reasonable time payments if desired on all Kolster equipment.

Thousands upon thousands of new homes now have an astonishingly better conception of what radio can be.

Neighbors of Kolster-owners are now invading the stores of Kolster dealers with persistent demands for the new Kolster Electrics.

1928 sees the day of inferior radio done forever for all who will demand a precision product.

Check . . . . up . . . . Kolster . . . . and . . . . you . . . . will . . . . buy . . . . Kolster.

ELECTRIC PLOW KILLS FARM PESTS

An electric plow invented by a Pittsburgh man sends a current of electricity into the ground as it turns the soil and the result is that the crops are not only hurried but various pests which inhabit the soil, are exterminated. It is said to make the use of fertilizer unnecessary and worn-out soils are rejuvenated.

Vagrant Waves of Interest to Fans

Aloys Havrilla, the announcer so frequently heard in the East, is a Czechoslovakian and a well-known baritone concert singer.

Argentine has 20 broadcasting stations under Government supervision, giving programs. About 150,000 sets are in use in the republic, the majority being concentrated about Buenos Aires.

Radio reception is sometimes improved by having the antenna face a different direction than its present position. This applies particularly to long-distance signals.

The American Foundation for the Blind, in New York city, has distributed 3000 radio sets to blind persons living in 46 States and the District of Columbia.

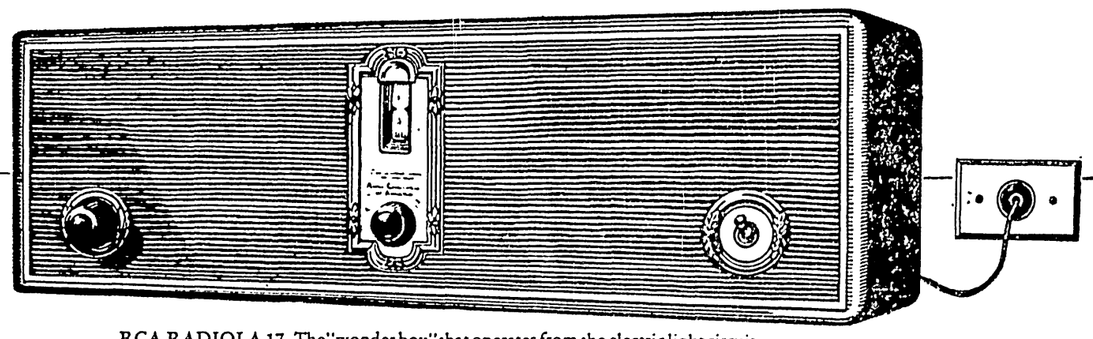
A radio tube large enough to hold a tall man now operates in the transmitter of WJZ. It is seven and one-half feet high, weighs 100 pounds and has a power of 100 kilowatts.

When variable condensers are difficult to turn, adjustments may be made to the bearings or the friction ring, but under no condition apply oil to the working parts.

RADIOLA 17

meets these exacting tests of a fine radio instrument

not only in the Research Laboratories, but in more than 100,000 American homes



RCA RADIOLA 17. The "wonder box" that operates from the electric light circuit (110 volt, 60 cycle, A. C.) as simply as an electric fan. Wonderfully balanced sensitivity, selectivity and tone fidelity. Built of the finest tested materials. The entire set self-contained in a fine mahogany cabinet. Equipped with Radiotrons, $157.50

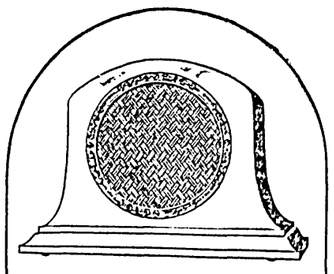
RADIOLA 17, the "wonder box" that has revolutionized the radio industry, has established itself as the most popular Radiola ever offered because it meets these exacting tests of a fine radio instrument:

Sensitivity—ability to pick up broadcasting stations, near and far, over the entire broadcast range.

Selectivity—ability to select the program from one station to the exclusion of all others.

Tone Fidelity—ability to reproduce faithfully—realistically—music and voice as transmitted from the broadcasting station.

Simplicity—inexpensive operation as simple as an electric lamp or electric fan, at the touch of the finger.



RCA LOUDSPEAKER 100A
The best-known loudspeaker in the country. Ideal to use with Radiola 17. Its range and realism have made it the most popular of all loudspeakers. $35

KPO KFI
KGO KGW
KFOA-KOMO
KHQ

Dependability—long life, with a minimum of upkeep—resulting from precision manufacture with the finest materials under competent engineering direction.

Radiola 17—product of the Radio Corporation of America and its associated companies, General Electric and Westinghouse—embodies all the world's knowledge of radio. In its design, laboratory tests and manufacture more than 200 electrical and acoustical engineers have participated.

And to more than 100,000 homes Radiola 17 has brought a new conception of simplified and perfected radio. Its great popularity proves that it is the radio receiver the whole country was waiting for.

There are other Radiolas ranging from $82.75 to $895, including the famous Super-Heterodyne in de luxe models. Radiolas may be purchased on the RCA Time Payment Plan from RCA Authorized Dealers.
